ORAL IRRIGATOR
IRRIGATOR BUCAL
ІРІГАТОР ДЛЯ РОТОВОЇ ПОРОЖНИНИ
ОРДІНІТІЛ ІРІГАТОР
ІРІГАТОР ДЛЯ ПОЛОСТИ РТА

EN Operating Instructions

You thank for purchasing PRO-922 stationary oral irrigator manufactured by B.Well. The device provides effective cleaning of interdental space and plaque removal. It uses prevents the formation of tartar and is an excellent prevention of caries and periodontal diseases.

PRO-922 oral irrigator is an essential oral care instrument for dental bridges, implants, crowns, and braces. It also may be used for gum massage that improves blood circulation, and thus promotes sanitation.

1. SAFETY PRECAUTIONS

ATTENTION!

When using electrical products, especially in presence of children, safety measures shall be taken.

The device is not intended for independent use by children or by persons with limited physical or mental abilities or with insufficient experience and knowledge, unless they are trained and instructed on device use by persons responsible for their safety.

BEFORE USING THIS DEVICE PLEASE READ THE INSTRUCTIONS FOR USE CAREFULLY

PRECAUTIONS!

To reduce risk of electric shock, burns, combustion or injury:

- Always disconnect the device after use.

- Do not place or store the device in a place, wherefrom it can fall in water.

- Do not place the device in water or other liquids.

- Do not leave the connected device unattended.

- Ensure close control when the device is used by children and/or disabled persons.

- Always use the device for the intended purpose described in the instructions for Use. Do not use the spare parts, unless recommended by the manufacturer.

- Do not use the device, if the cable or the plugs are damaged. If the device is out of order, if it has fallen, has been damaged and/or has been subjected to moisture. Contact the service center.

- Do not use the device while asleep and/or feeling sleepy.

- Do not drop the device and do not insert any objects in device openings.

- Do not use the device in open air and in places, where aerosols are used.

- Connect the device only to a properly grounded outlet.

- Prior to filling the tank with water disconnect the device. Always fill in the tank with water in strict compliance with the instructions for Use. Do not overfill the tank, always follow the instructions.

- It is forbidden to modify the device.

- Do not touch the power cable and the plug with wet hands.

- Do not touch the device, if it has fallen into water. Immediately disconnect it with dry soft cloth.

- The power cable shall not contact hot or heated surfaces.

- In case of failure of the device, do not try to repair it by yourselves.

- Contact the service and consulting center.

- If you have recently had dental and/or surgical intervention, if you receive treatment related to oral issues, if the mucus in the oral cavity is damaged, please, consult your dentist.

- Please, consult your dentist, if you experience intensive gum bleeding after two weeks of use of the irrigator.

- Please, handle the device with care. Do not drop it and do not subject it to strong impact action.

CAUTION! The manufacturer and the seller are not liable for consequences for failure to read the instructions for Use and for lack of understanding of the operating principles of the device.

If you have any issues after reading the Instructions for Use, consult the doctor or contact the service center.

It is forbidden to:

- Substances and solutions containing suspended particles (extracts, brews, suspensions, etc.). Use of viscous solutions with sediment may deteriorate performance of the irrigator and may cause clogging of the hose or the pump.

- Oil-based substances. Use of such solutions may have corrosive impact on the irrigator hose.

- Antiseptic solutions (potassium permanganate, miramistin, and other antiseptics).

- Salt solutions, toothpastes or chemical substances.

- The following liquids may be used for oral irrigation:

- Prefiltered clean warm water (up to 40°C).

- Special rinses for use with irrigator / Common mouth rinse solution (always mixed in a definite ratio with water. For recommended proportions refer to the rinse manufacturer's instructions).

CAUTION! If special solutions for irrigator / common mouth rinse solution are applied, be sure to clean the device with fresh lake water after using such: fill in the water tank with water and run an extra irrigation cycle, by draining the appliance through the nozzle.

Please close attention to the expiry dates of permitted solutions.

Never use outdated solutions.

2. PURPOSE AND CONTRAINDICATIONS

B.Well PRO-922 oral irrigator is designed for:

- Comprehensive care and hygiene support for oral cavity and interdental spaces;

- Oral care in the presence of bridges, implants, crowns, braces, etc. orthodontic systems;

- Gum massage.

Application range covers individual and family use. The operating principle of the stationary irrigators consists in targeted exposure of the surface of teeth, gums, mouth mucous and orthodontic systems to adjust water flow.

The irrigator removes food debris and malignant bacteria with water jet.

Contraindications: Prior to use of the irrigator, it is recommended to consult the dentist in case of surgical intervention in the oral cavity. You may experience insignificant bleeding during several first uses of the irrigator. If your gums are healthy, any bleeding shall disappear within 1-2 weeks of use. If you experience gum bleeding after 2 weeks of use, stop using the irrigator and consult the dentist.

3. DEVICE SET AND APPEARANCE

Tank cover with nozzles storage case

Nozzle removal/fixation button

Nozzle rotation angle control

ON/OFF button for the water flow

Holder for the irrigator handle

Irrigator handle with a hose

Water tank

Jet intensity control

Anti-slip feet

Figure 1. Appearance of the device

1. Main unit - 1 pc.
2. Irrigator handle with a hose - 1 pc.
3. Water tank (600 ml) - 1 pc.
4. Tank cover with nozzles storage case - 1 pc.
5. Standard nozzle - 3 pcs.

Standard nozzle (3 pcs.)

It is designed for complex oral care, i.e. for cleaning of interdental spaces and gum massage

Tongue cleaning nozzle (1 pcs.)

It is designed for removal and for making your breath fresh

Periodontal nozzle (1 pcs.)

It is designed for cleaning of gingival, gingival pocket and orthodontic surface under prosthesis and dental bridges

Orthodontic nozzle (1 pcs.)

It is designed for cleaning of the gaps between densely spaced teeth and gum margin. It also ensures the hygiene of braces and other orthodontic systems

Nozzle for implants, dental bridges, crowns, and veneers (1 pcs.)

It is designed for delicate surface cleaning of implants, dental bridges, crowns and veneers

4. PREPARING FOR USE

Connect the device to the mains. Insert the plug in the outlet. If the plug is equipped with a switch, make sure it is turned on.

Tank preparation

To remove the water tank you need to hold the device with one hand and pull the tank upward while holding the cover.

Thereafter, remove the cover from the tank and fill the tank with warm water.

Place the tank back in the main unit, press it down by applying slight uniform effort and place the cover back.

Figure 2.

Figure 3.

Figure 4.

Figure 5.

Nozzle mounting and removal

Insert the nozzle in the opening on the surface of the irrigator handle, see Figure 2.

Colored ring on the nozzle shall become tightly close to the handle. To remove the nozzle, press the nozzle removal/fixation button, and remove the nozzle, see Figure 3.

Jet intensity selection

When the jet intensity control is in the extreme left position, the device is off. Turn the control clockwise until a "click" sound is heard. The initial pressure level is minimal.

Smoothly turn the control clockwise to increase the jet intensity. See Figure 4.

5. DEVICE USE

Prior to using the device, the jet intensity control should be placed in the extreme left position. Water supply button shall be in OFF position. See Figure 5.

Place the nozzle into your mouth. Turn on the device with your free hand, as described in Figure 6.

Place the water flow button in ON position. Select the jet intensity.

Jet direction may be changed by turning the nozzle rotation angle control in the

upper part of the handle in any direction. Nozzle rotation angle is 360°. See Figure 6.

Recommended method

Direct the jet at 90° to the gum line. Apply your lips to avoid splashes. But do not close your mouth; let the water freely flow out of your mouth. See Figure 8.

For better results start with side and distant teeth and move towards the front teeth. See Figure 9.

Move the nozzle along the gum line from one tooth to another, slowing down between the teeth. See Figure 10.

Keep cleaning the areas around and between the teeth are clean. See Figure 11.

Water flow shut down

You may stop water flow by switching the button on the handle into the OFF position (see Figure 11).

The device will turn off automatically after more than 3 minutes of procedure.

Note:

The use of unfiltered running water in the irrigator may cause with time formation of lime scale and deposits in internal parts of the device, which in its turn, may affect its performance.

In view of hygienic considerations, prior to first use, as well as after long idle period, the irrigator shall be rinsed. For the above purpose fill the tank with water and turn the device on, direct the irrigator handle downwards in the sink.

• Always use the device for the intended purpose described in the instructions for Use. Do not use the spare parts, unless recommended by the manufacturer.

• Do not use the device, if the cable or the plugs are damaged. If the device is out of order, if it has fallen, has been damaged and/or has been subjected to moisture. Contact the service center.

• Do not use the device while asleep and/or feeling sleepy.

• Do not drop the device and do not insert any objects in device openings.

• Do not use the device in open air and in places, where aerosols are used.

• Connect the device only to a properly grounded outlet.

• Prior to filling the tank with water disconnect the device. Always fill in the tank with water in strict compliance with the instructions for Use. Do not overfill the tank, always follow the instructions.

• It is forbidden to modify the device.

• Do not touch the power cable and the plug with wet hands.

• Do not touch the device, if it has fallen into water. Immediately disconnect it with dry soft cloth.

• The power cable shall not contact hot or heated surfaces.

• In case of failure of the device, do not try to repair it by yourselves.

• Contact the service and consulting center.

• If you have recently had dental and/or surgical intervention, if you receive treatment related to oral issues, if the mucus in the oral cavity is damaged, please, consult your dentist.

• Please, consult your dentist, if you experience intensive gum bleeding after two weeks of use of the irrigator.

• Please, handle the device with care. Do not drop it and do not subject it to strong impact action.

CAUTION! The manufacturer and the seller are not liable for consequences for failure to read the instructions for Use and for lack of understanding of the operating principles of the device.

If you have any issues after reading the Instructions for Use, consult the doctor or contact the service center.

It is forbidden to:

- Substances and solutions containing suspended particles (extracts, brews, suspensions, etc.). Use of viscous solutions with sediment may deteriorate performance of the irrigator and may cause clogging of the hose or the pump.

- Oil-based substances. Use of such solutions may have corrosive impact on the irrigator hose.

- Antiseptic solutions (potassium permanganate, miramistin, and other antiseptics).

- Salt solutions, toothpastes or chemical substances.

- The following liquids may be used for oral irrigation:

- Prefiltered clean warm water (up to 40°C).

- Special rinses for use with irrigator / Common mouth rinse solution (always mixed in a definite ratio with water. For recommended proportions refer to the rinse manufacturer's instructions).

CAUTION! If special solutions for irrigator / common mouth rinse solution are applied, be sure to clean the device with fresh lake water after using such: fill in the water tank with water and run an extra irrigation cycle, by draining the appliance through the nozzle.

Please close attention to the expiry dates of permitted solutions.

Never use outdated solutions.
